

TurboCore Signal Provider App: Market Research & Comprehensive Marketing Plan

Executive Summary

This marketing plan outlines the go-to-market strategy for a signal provider app ("TurboCore") built on the ML-enhanced TQQQ 5/30 EMA Crossover + Core-Satellite SMA200 strategy, targeting Gen Z investors (ages 16–27) and their parents. The app offers two modes: (1) signal-only alerts where users place trades manually, and (2) auto-trade via Tastytrade integration—requiring only a regular brokerage account, no options approval needed. The strategy's backtested performance of 27.8% CAGR over 7 years (\$5K → \$27.8K) with just -11.2% worst-year drawdown provides a compelling product foundation.[1]

The micro-investing app market is valued at \$2.08 billion in 2026, growing at 17.2% CAGR to \$3.93 billion by 2030. The timing is ideal: 56% of Gen Z aged 18–25 hold investments, 41% would allow AI to manage their investments, and 29 states now require financial literacy courses for graduation, creating a pipeline of financially-aware teens entering the market. The app is positioned at the intersection of three megatrends: AI-powered investing, Gen Z financial awakening, and the family finance movement.[2][3][4][5]

Part 1: Market Research

Target Market Sizing

The addressable market sits at the convergence of several high-growth segments:

Segment	Market Size (2026)	Growth Rate	Source
Micro-Investing Apps	\$2.08B	17.2% CAGR	[2]
Investment Apps (Broad)	\$63.62B	19.4% CAGR	[6]
Micro-Investing Platforms	\$2.5B	9.8% CAGR	[7]

Gen Z (born 1997–2012) represents approximately 68 million people in the U.S. Among those aged 18–25, roughly 56% already hold some form of investment. By early 2025, about one-third of 25-year-olds possess investment accounts—a sixfold rise since 2015—and those from lower-income backgrounds are five times more likely to invest compared to a decade ago. The total addressable market (TAM) for a signal app targeting Gen Z investors and their parents spans approximately 15–20 million households.[5][8]

Gen Z Investor Behavior Profile

Gen Z's relationship with money is defined by digital-first habits, cautious optimism, and social learning:

- **Mobile-first:** 66% use mobile apps as their primary banking method[9]
- **Investing early:** 30% of Gen Z began investing in university or early adulthood, compared to 15% of Millennials, 9% of Gen X[3]
- **AI-receptive:** 41% of Gen Z and Millennials would allow an AI assistant to manage their investments—only 14% of Baby Boomers said the same[3]
- **Social media-influenced:** Over 50% say social media convinced them to enter the stock market[10]
- **Risk-aware:** Risk level (45%), potential returns (37%), and fees/expenses (37%) are top factors when evaluating investments[9]
- **Low patience for bad UX:** 81% will abandon a brand after a poor digital experience[11]

- **Financial literacy hunger:** 84% crave financial literacy education, yet only 25% invest beyond basic savings accounts[12]
- **Average Gen Z investment portfolio:** \$32K vs. Millennials at \$173K[13]

The critical insight: Gen Z wants to invest but needs guidance, simplicity, and trust. They don't want to be told what to do by a "suit"—they want to be empowered by technology they understand.

Gen Z Content Consumption & Discovery

Understanding where Gen Z discovers financial products is essential to channel strategy:

- #FinTok has accumulated over 4.7 billion views on TikTok, with 53% of users planning to consume even more FinTok content in 2026[14][15]
- **YouTUBE** is the primary investment advice source for 41% of Gen Z, followed by TikTok (24%) and Instagram (21%)[16]
- **Discord** communities are exploding: the platform's Marketing Hub reports 12.8% average engagement vs. Instagram's 1.3%, with users spending 28 minutes per session in branded communities[17]
- **Social proof is currency:** One in five Gen Z acknowledges social media's direct impact on portfolio decisions, while 32% use it as an investment information source[5]
- Influencers like Your Rich BFF (Vivian Tu) command 2.7M TikTok + 3.8M Instagram followers, demonstrating that relatable finance content drives massive followings[10]

Financial Literacy Regulatory Tailwind

A massive structural tailwind is building: 29 states now have financial literacy graduation requirements, up from just 6 in 2019. With Texas (1.7M additional students), Kentucky, Colorado, and Delaware all passing requirements in 2025, 73% of U.S. high school students will receive financial literacy education before graduating once all laws are fully implemented by 2031. This creates a generation of financially-aware teens primed for investment products.[18][4]

Competitive Landscape

Platform	Model	Price	Target	Auto-Trade	Unique Angle
Turbo Core (Ours)	Signal + Auto-Trade	Freemium → \$9.99/mo	Gen Z + Parents	Yes (Tastytrade)	ML-powered TQQQ strategy, family mode, education
Composer	Build-your-own algo	\$32/mo (\$384/yr)	Advanced retail	Yes	3,000+ community strategies, AI strategy builder[19][20]
Autopilot	Copy trading	\$100/yr per portfolio	Copy traders	Yes	Politician tracking (Pelosi), \$2B+ traded[21]
Acorns	Round-up micro-invest	\$3–12/mo	Beginners	N/A (robo)	Spare change investing, custodial accounts[22]
Stash	Guided investing	\$3–9/mo	Beginners	N/A (robo)	Stock-Back rewards, fractional shares[23]
Greenlight	Family debit + invest	\$5.99–24.98/mo	Families (kids)	N/A	\$2B+ managed, 6.5M families, +65% YoY teen investing[24]
Kidvestors	Financial literacy	Varies	K-12 students	No	Gamified education, school partnerships[25]

Platform	Model	Price	Target	Auto - Trade	Unique Angle
Fidelity Youth	Teen brokerage	Free	Teens 13–17	No	Teen-owned (not custodial), self-directed[26]

TurboCore's competitive gap: No existing platform combines (1) a specific, backtested ML strategy with proven returns, (2) signal-only AND auto-trade modes, (3) Gen Z + parent dual-persona design, and (4) financial education integrated into the trading experience. Composer is the closest competitor at \$32/mo but targets advanced users and requires strategy-building knowledge. Autopilot copies other people's trades but charges per portfolio and has "mediocre performance". Greenlight is the family finance leader but offers no signal/strategy layer.[19][27][24]

Regulatory Positioning

The app's signal-only mode can leverage the **Publisher's Exclusion** under Section 202(a)(11) of the Investment Advisers Act. To qualify, the publication must be: (1) bona fide/genuine—providing disinterested commentary, (2) general and impersonal—not adapted to individual subscriber needs, and (3) published on a regular schedule. The auto-trade mode, which executes trades based on algorithmic signals in users' own brokerage accounts, likely requires either SEC registration as an Internet Investment Adviser or operation through a registered broker-dealer partnership.[28][29][30][31]

The recommended approach: Launch signal-only first (lower regulatory burden), add auto-trade via Tastytrade API integration as Phase 2 with proper legal counsel. SnapTrade's unified brokerage API can expand broker support beyond Tastytrade to Robinhood, Fidelity, Schwab, and others through a single integration.[32]

Part 2: Product Positioning & Value Proposition

Brand Identity: TurboCore

Tagline: "Your AI Co-Pilot for Wealth Building"

Positioning statement: TurboCore is the first AI-powered investment signal app built for Gen Z and their families. It turns a backtested, ML-enhanced strategy into simple signals anyone can follow—no options account needed, start with any amount, and optionally auto-trade through your existing Tastytrade account.

Dual-Persona Design

Persona 1: The Gen Z Investor (age 16–27)

- Wants to invest but overwhelmed by choices
- Trusts technology over human advisors
- Needs small-dollar accessibility (\$25+ starting)
- Values transparency (show me WHY, not just WHAT)
- Motivated by progress visualization and social validation

Persona 2: The Parent/Guardian (age 35–55)

- Wants to help their child build wealth responsibly
- Concerned about risk and scams
- Values education + results
- Willing to pay for quality financial guidance
- Already familiar with custodial/UTMA accounts

Product Tiers

Feature	Free Tier	Core (\$4.99/mo)	Turbo (\$9.99/mo)	Family (\$14.99/mo)
Daily market regime alerts	✓	✓	✓	✓
Weekly signal summary	✓	✓	✓	✓
Real-time buy/sell signals	✗	✓	✓	✓
ML confidence score	✗	✓	✓	✓
Signal history & analytics	✗	Basic	Full	Full
Financial literacy modules	3 free	All	All	All
Auto-trade (Tastytrade)	✗	✗	✓	✓
Portfolio size optimization	✗	✗	✓	✓
Parent dashboard + controls	✗	✗	✗	✓
Up to 3 linked accounts	✗	✗	✗	✓
Discord VIP community	✗	✗	✓	✓

Pricing is deliberately lower than Composer (\$32/mo) and Autopilot (\$100/yr per portfolio) to match Gen Z's price sensitivity. The \$9.99 Turbo tier targets the 42% of Gen Z who regularly use subscription services. The Family tier enables parents to manage custodial/UTMA

accounts alongside their own—the first product to combine signal-based investing with family account management.[33][9]

Key Differentiators

1. **No options account required:** The strategy trades ETFs only (QQQ, QLD, TQQQ, SGOV)—regular brokerage accounts work, removing the barrier that blocks most Gen Z from leveraged strategies[1]
 2. **Fractional shares supported:** Start with \$25+. Tastytrade supports fractional shares, so the app calculates optimal allocation regardless of account size[34]
 3. **ML-powered with transparency:** Users see the regime state (Bull/Sideways/Bear), the signal confidence score, and the reasoning—not a black box
 4. **Backtested track record:** \$5K → \$27.8K over 7 years (27.8% CAGR), surviving 2022 with only -11.2% while QQQ lost -33%[1]
 5. **Education-integrated:** Every signal includes a 60-second "why" explanation, building financial literacy alongside returns
-

Part 3: Marketing Strategy

Channel Strategy & Budget Allocation

Based on Gen Z content consumption patterns, the marketing mix prioritizes organic social + community over paid advertising. Average fintech CAC is \$1,450, but consumer fintech apps can achieve \$18–45 CPA through TikTok and \$12–35 through Instagram with optimized creative.[35][36]

Channel	Budget %	Purpose	Target CAC
TikTok (organic + paid)	30%	Awareness, virality, education	\$15–30
Instagram/Reels	15%	Brand building, social proof	\$20–35
YouTube (long-form)	15%	Deep education, trust building	\$10–25
Discord community	15%	Retention, engagement, WOM	\$5 (organic)
Influencer partnerships	15%	Credibility, reach	\$20–40
Referral program	10%	Viral growth loop	\$8–15

TikTok & FinTok Strategy

TikTok is the primary acquisition channel given that #FinTok has 4.7 billion views and Gen Z's engagement rates on the platform are 7.5% for accounts under 10K followers—more than double Instagram's 3.45%.[15][36]

Content pillars (3–5 posts/week):

- **"Regime Report"**: 30-second daily video—"Market is in BULL mode today. Here's what TurboCore is doing and why." Builds habit + trust
- **"What if you started with \$500?"**: Compound growth visualizations using real backtest data. Gen Z responds to concrete dollar amounts
- **"Your parents' advisor charges 1%. Our AI charges \$9.99/mo"**: Direct comparison content attacking the AUM fee model
- **"TurboCore vs. Buy & Hold"**: Side-by-side 2022 performance—TurboCore -11.2% vs. TQQQ -83%. Dramatic, shareable

- **"Financial literacy in 60 seconds"**: Explain EMA, regime detection, fractional shares—position the app as an educator
- **Duet/stitch with FinTok creators**: React to common investing mistakes with "here's what TurboCore would have done"

TikTok's CPC averages \$1.80 vs. Instagram's \$2.50, with a 2.14% conversion rate. For a \$50/day minimum campaign budget, expect 25–30 clicks/day, driving 500–800 sign-ups/month at scale.[37]

YouTube Strategy

YouTube is where 41% of Gen Z get investment advice and where trust is built through long-form content. The strategy leverages both a branded channel and creator partnerships.[16]

Owned channel content (1–2 videos/week):

- **"I let an AI trade \$5,000 for 30 days"**: Documentary-style transparency content showing real paper trading results
- **"How the TurboCore ML engine works (explained for beginners)"**: Technical credibility without jargon
- **"Parent-teen investing challenge"**: Family content showing both personas using the app together
- **Strategy deep-dives**: Monthly performance reviews with full signal history walk-through

Discord Community: The Retention Engine

Discord's branded communities report 12.8% engagement rates vs. Instagram's 1.3%, and Gen Z spends 47% less time on traditional social media compared to 2024, gravitating toward authentic community experiences. The Discord community is not just a marketing channel—it IS the product's engagement layer.[17]

Discord server structure:

- **#daily-signals**: Real-time regime + signal alerts (free tier gets delayed)
- **#explain-like-im-16**: Beginner questions answered by community + AI bot
- **#my-portfolio-journey**: Users share progress (social proof + retention)

- #strategy-discussion: Advanced users discuss ML enhancements
- #parent-corner: Parents discuss custodial accounts, tax implications, goals
- #weekly-ama: Live voice sessions with the development team
- #memes: Financial memes channel—essential for Gen Z engagement

Investing Discord communities like Eagle Investors scaled to 20,000 members and projected \$300K annual revenue through subscriptions alone. TurboCore's Discord serves as both community and conversion funnel.[38]

Influencer Partnership Program

Partner with 3 tiers of creators to match Gen Z's social proof expectations:

Tie r	Follower Count	# of Partn ers	Compensatio n	Content Type
Na no	5K–25K	50	Free Turbo tier + commission	Authentic review, daily signal sharing
Mic ro	25K– 250K	15	\$500– 2K/video + commission	Strategy explanation, "I tried it" content
Ma cro	250K+	3–5	\$5K– 15K/campaign	Brand awareness, launch campaigns

Target FinTok creators who emphasize education over hype—the app's transparent ML approach aligns with creators who value credibility over pump-and-dump content. Avoid creators who primarily shill crypto or meme stocks, as this conflicts with the systematic, data-driven brand identity.[16]

Referral & Viral Loop Program

Referral programs drive 20–40% of customer growth for startups, and Gen Z's community-oriented behavior makes word-of-mouth the highest-ROI channel.[39]

"Give \$5, Get \$5" Program:

- Referrer gets \$5 account credit (applied to subscription)
- Referee gets first month of Core tier free
- Bonus: If the referee upgrades to Turbo within 30 days, referrer gets an additional month free

Family Viral Loop:

- Parent signs up → sends invite to teen → teen joins under Family tier
- Teen invites 3 friends → all get 1 month Core free
- K-factor target: 1.3 (each user brings in 1.3 new users)

Social sharing mechanics:

- "Share your regime streak"—gamified display of consecutive correct regime predictions
- "My TurboCore year in review"—Spotify Wrapped-style annual summary
- Leaderboard of top referrers in Discord community

Gamification Strategy

With 65% of Gen Z spending 3+ hours daily gaming, gamification is essential for retention:[11]

- **Streaks:** Track consecutive days checking signals. 7-day streak → badge. 30-day → exclusive Discord role
- **XP system:** Earn XP for completing education modules, sharing signals, inviting friends
- **Levels:** "Paper Trader" → "Signal Follower" → "Turbo Trader" → "ML Master"
- **Achievements:** "Survived a Bear Market" (held through a regime-off period), "First \$1K Milestone"

- **Weekly challenges:** "Predict the regime"—users guess Bull/Sideways/Bear, compare against ML model

BBVA's gamified financial literacy program attracted 100,000 users in 6 months with an 18% higher satisfaction rate. Moven's personalized notifications made users 50% more likely to save.[11]

Part 4: Go-to-Market Timeline

Phase 1: Pre-Launch (Weeks 1–6)

Objective: Build waitlist of 5,000+ users and establish social presence.

- Create TikTok, Instagram, YouTube accounts with "coming soon" branding
- Post 3x/week on TikTok: educational content using backtest data, "behind the scenes" of ML development
- Launch landing page with email capture and waitlist counter
- Deploy Discord server with #waitlist-chat and #early-feedback channels
- Begin outreach to 20 nano-influencers for beta testing
- Legal consultation: finalize Publisher's Exclusion compliance for signal-only mode

Phase 2: Beta Launch (Weeks 7–12)

Objective: Onboard 1,000 beta users, validate product-market fit, achieve 60%+ Day-7 retention.

- Release signal-only mode (iOS + Android) to waitlist
- Free tier for all beta users with access to Core features
- Daily engagement tracking: DAU, signal open rate, education module completion
- Weekly feedback sessions in Discord voice channel
- A/B test onboarding flows: "quick start" vs. "guided tutorial"
- Content ramp: 5x/week TikTok, 2x/week YouTube, daily Instagram Stories
- Collect and amplify user testimonials ("I followed TurboCore signals for 30 days...")

Phase 3: Public Launch (Weeks 13–18)

Objective: 10,000 users, 15% free-to-paid conversion, establish brand awareness.

- Full public release with all 4 tiers
- Launch Tastytrade auto-trade integration (Turbo + Family tiers)
- Activate referral program with \$5/\$5 incentives
- Paid TikTok campaign: \$3,000/month targeting 18–27 age demographic
- Micro-influencer campaign: 10 creators posting "I tried TurboCore for a week"
- Press outreach: TechCrunch, Benzinga, Fintech-specific media
- University partnerships: target 10 campuses with investing clubs

Phase 4: Growth Acceleration (Months 5–12)

Objective: 50,000 users, \$30K+ MRR, community of 10,000+ Discord members.

- Scale paid social to \$10K/month across TikTok + Instagram
- Launch macro-influencer campaign (3–5 creators, \$5K–15K each)
- Introduce Family tier marketing: target parents via Facebook/Instagram (35–55 demo)
- Partner with financial literacy organizations (Jump\$tart, NEFE) for school distribution
- Integrate SnapTrade for multi-broker support (Robinhood, Fidelity, Schwab)[32]
- Launch "Parent-Teen Challenge" viral campaign
- Explore BNPL option for annual subscription (42% of Gen Z used BNPL in 2024)[33]
- Build high school/college ambassador program: 100 campuses

Part 5: Revenue Model & Unit Economics

Revenue Projections (Year 1)

Metric	Month 3	Month 6	Month 12
Total users	5,000	20,000	50,000
Paid subscribers	500	3,000	10,000
Conversion rate	10%	15%	20%
ARPU	\$7.50	\$8.50	\$9.50
MRR	\$3,750	\$25,500	\$95,000
ARR run rate	\$45K	\$306K	\$1.14M

ARPU assumption: Blended across Core (\$4.99), Turbo (\$9.99), and Family (\$14.99) tiers, weighted toward Core in early months, shifting toward Turbo/Family as auto-trade launches.

Unit Economics Target

Metric	Target	Benchmark
CAC (blended)	\$15–25	Fintech avg: \$1,450[35]; consumer app: \$18–45[36]
LTV (12-month)	\$85–115	Based on \$9.50 ARPU × 10-month avg lifetime
LTV:CAC ratio	4:1+	Healthy fintech target: 3:1+[40]
Payback period	< 3 months	B2C fintech target: < 12 months
Monthly churn	5–8%	Fintech industry: 37% annual (worst of any industry)[35]

The low CAC target is achievable because: (1) organic TikTok/Discord drives 60%+ of acquisition, (2) the referral loop targets K-factor > 1.2, and (3) the product's educational component creates organic word-of-mouth in a demographic that actively shares financial content.

Part 6: Tastytrade Auto-Trade Integration

Technical Architecture

The auto-trade feature leverages Tastytrade's Open API, which provides full read and write access for equity, crypto, options, and futures orders, plus a sandbox environment for testing. The OAuth 2.0 flow uses short-lived access tokens (15 minutes) refreshed via long-lived refresh tokens.[41][42]

Integration flow:

1. User connects Tastytrade account via OAuth in-app (SnapTrade pattern for UX)[43]
2. App fetches account balances, positions, and account type
3. ML engine calculates optimal allocation based on account size and regime
4. On signal trigger, app submits fractional share orders via API
5. User receives push notification with fill confirmation
6. Parent dashboard (Family tier) shows activity log and performance

Key API capabilities used:

- Submit, modify, or cancel equity orders (QQQ, QLD, TQQQ, SGOV)[41]
- Access sandbox for paper trading validation[41]
- Sync watchlists programmatically[41]
- Multi-account support: single OAuth authorization returns all accounts (margin, IRA, entity)[42]

Account Type Flexibility

The strategy only trades ETFs, making it compatible with:

- **Regular individual brokerage** (most common for Gen Z)
- **Custodial UTMA/UGMA** (parent manages for minor, no contribution limits, first \$1,300 earnings tax-exempt)[44]
- **Roth IRA** (tax-advantaged, ideal for long-term compounding)
- **Fidelity Youth Account** (teen-owned, ages 13–17—if SnapTrade integration is added)[26]

This is a critical differentiator: the strategy requires NO options approval, removing the #1 barrier that prevents Gen Z from accessing leveraged strategies.

SnapTrade Multi-Broker Expansion

SnapTrade provides a unified API for 20+ brokerages with 95%+ connection success rates. Phase 2 integration enables users with Robinhood, Fidelity, Schwab, or other accounts to auto-trade without switching brokers—dramatically expanding the addressable market. SnapTrade handles data normalization across brokerages, including exchange identification and currency conversions.[45]

Part 7: Implementation Plan for Antigravity

Agent Architecture (App Layer)

Building on the existing 10-agent ML trading system from the strategy report, add 5 new agents for the signal provider app:[46]

Agent	Function	Technology
Agent 11: User Manager	Authentication, profiles, subscription tiers, family linking	Firebase Auth + Stripe
Agent 12: Signal Publisher	Format ML outputs into user-friendly alerts, push notifications	FCM + WebSocket
Agent 13: Education Engine	Serve contextual "why" explanations for each signal	GPT-4 API + content DB
Agent 14: Gamification Engine	XP, streaks, achievements, leaderboards	Redis + PostgreSQL
Agent 15: Parent Dashboard	Portfolio view, activity log, controls, family account linking	React Native + REST API

Tech Stack (App Layer)

Component	Technology	Rationale
Mobile App	React Native (Expo)	Cross-platform iOS/Android, rapid iteration
Backend API	Node.js (TypeScript) + Express	Fast development, Antigravity-compatible
Auth	Firebase Auth + Stripe Billing	OAuth social login, subscription management
Real-time	WebSocket (Socket.io)	Live signal delivery, regime updates
Database	PostgreSQL (Supabase)	User data, subscriptions, signal history
Cache	Redis	Real-time leaderboards, session management
Push Notifications	Firebase Cloud Messaging	Signal alerts, regime changes
Broker Integration	Tastytrade SDK → SnapTrade SDK	Auto-trade execution, multi-broker
Analytics	Mixpanel + PostHog	User behavior, funnel optimization
CDN/Media	Cloudflare R2	Education video/content delivery

Development Phases for Antigravity

Sprint 1–2 (Weeks 1–4): Foundation

- User auth (email, Google, Apple Sign-In)
- Onboarding flow with risk tolerance questionnaire

- Signal display UI (regime state, buy/sell indicators, confidence meter)
- Free tier: delayed signals, basic education modules
- Push notification infrastructure

Sprint 3–4 (Weeks 5–8): Core Features

- Paid subscription integration (Stripe)
- Real-time signal delivery via WebSocket
- Signal history & analytics dashboard
- Education module engine (10 starter modules)
- Gamification system (XP, streaks, basic achievements)

Sprint 5–6 (Weeks 9–12): Auto-Trade & Family

- Tastytrade OAuth integration
- Auto-trade execution engine (fractional shares, allocation calculation)
- Paper trading mode (sandbox)
- Parent dashboard with activity monitoring
- Family tier account linking (up to 3 accounts)

Sprint 7–8 (Weeks 13–16): Growth Features

- Referral program with tracking
- Discord bot integration (signal forwarding)
- Social sharing cards (regime streaks, portfolio milestones)
- SnapTrade integration for multi-broker support
- Advanced gamification (leaderboards, weekly challenges)

API Endpoints (Key Routes)

```

POST /auth/register
POST /auth/login
GET /signals/current    → Current regime + signal
GET /signals/history    → Historical signals + performance
POST /broker/connect    → Initiate Tastytrade OAuth
POST /broker/execute    → Execute signal (auto-trade)
GET /portfolio/status   → Current allocation + PnL
GET /education/modules  → Education content library

```

POST /education/complete → Mark module complete, award XP
GET /gamification/profile → XP, level, achievements
GET /family/dashboard → Parent overview of linked accounts
POST /referral/generate → Create referral link
GET /referral/stats → Referral tracking

Part 8: Risk Mitigation

Regulatory Risks

Risk	Mitigation
SEC classifies signals as investment advice	Launch signal-only first under Publisher's Exclusion; general, impersonal, regular publication schedule[31]
Auto-trade triggers RIA registration	Partner with registered broker-dealer or register as Internet Investment Adviser under SEC exemption[29]
FINRA scrutiny of trade recommendations	Clear disclaimers; signals are educational, not personalized advice
State-level registration requirements	Internet Adviser Exemption eliminates 50-state registration burden[29]

Product Risks

Risk	Mitigation
Strategy underperforms in live trading	3-month paper trading validation before real-money auto-trade
Users don't understand leveraged ETF risks	Mandatory risk acknowledgment + education module before enabling TQQQ signals
Gen Z churn after novelty wears off	Gamification + community + education create multi-layered retention hooks
Tastytrade API changes or restrictions	SnapTrade integration provides broker diversification[32]

Reputational Risks

Risk	Mitigation
Accused of targeting vulnerable young investors	Lead with education; free tier is education-first with no trading capability
Large drawdown during high-profile market event	Transparent communication; the 2022 backtest showing -11.2% vs TQQQ -83% is the strongest defense[1]
FinTok backlash against "another trading app"	Position as anti-hype: "data over drama," transparent ML, no meme stocks

Part 9: KPIs & Success Metrics

North Star Metrics

Timeframe	KPI	Target
Month 3	Waitlist → Beta conversion	40%+
Month 6	DAU/MAU ratio	35%+
Month 6	Free-to-paid conversion	15%+
Month 12	Total users	50,000
Month 12	MRR	\$95,000
Month 12	NPS score	50+
Month 12	Discord community size	10,000+

Engagement Metrics

- Signal open rate: Target 70%+ (push notification → app open)
- Education module completion: Target 60%+ for onboarding series
- Referral rate: Target 25%+ of paid users send at least 1 invite
- Average session duration: Target 4+ minutes
- 7-day retention: Target 60%+
- 30-day retention: Target 40%+

Financial Metrics

- Blended CAC: < \$25
- LTV:CAC: > 4:1
- Gross margin: > 80% (software + API costs only)
- Monthly churn: < 8% (premium tiers)
- Revenue per signal (proxy): Track correlation between signal quality and retention
