

will it be a good idea that provide a chat room that allow user to use perplexity api to chat on how to trade stocks. I have tried which is pretty good since I can do a screen shot of my position and ask how to trade etc. Do a deep search on this and see if provide it as additional feature will that be a plus, how should I charge , how to control the cost, I do have 5000 API credits.

Yes — build it. The economics are almost too good to pass up. Here's the key insight breakdown:

Your \$5,000 Credits in Perspective

With \$5,000 in Perplexity API credits, you are automatically at Tier 5 (Enterprise) — the highest tier, giving you 33 queries/second and 2,000 requests/minute. At Sonar pricing (\$1/\$1 per million tokens), a typical 10-message trading Q&A session costs about \$0.011. That means your \$5,000 covers roughly 455,000 average sessions — or about 15 months of operation at 500 active subscribers using it daily.^{[1] [2] [3] [4]}

The Cost Per User Is Negligible

Even at the unlimited tier with a 1,500 message/month soft cap, the API cost is under \$1.65/user/month. At \$69/month for the Bundle plan, that's a 97.6% margin on the AI component. The feature is essentially free to offer.^{[2] [5]}

How to Price It: Bundle, Don't Charge Separately

SaaS research is unambiguous here — products with AI features bundled in see 35% higher adoption vs. features requiring a separate purchase. Companies pricing AI separately do get 15–20% incremental revenue lifts from power users, but for TradeMind@bot at this stage, adoption matters more. The recommended structure:^[6]

- TurboCore (\$29/mo): 100 messages/month included — enough to hook users, creates upgrade pressure
- TurboCore Pro (\$49/mo): 500 messages/month
- Both Bundle (\$69/mo): Unlimited (1,500/month fair use soft cap)
- Add-on packs: \$5 for 200 extra messages (for Core/Pro users who need more)

The Feature Competitors Can't Copy

The killer differentiator is injecting today's live TurboCore signal into every AI chat session. When a user asks *"should I go aggressive today?"*, the AI responds knowing the current regime is BULL/87% confidence. No Chart AI, no ChartChatAI, no TradingView can do that — they have no proprietary signal to inject.^{[7] [8]}

Compliance in 3 Steps

FINRA's 2026 GenAI guidance requires chat interactions to be archived and supervised like other financial communications. For TradeMind@bot (not an RIA/broker-dealer), that means: (1) log all conversations with timestamps in your PostgreSQL ai_chat_logs table, (2) show a static educational disclaimer above every chat session, and (3) never let the AI say "buy X" — only "here's the analysis."^{[9] [10] [11]}

The full report covers the complete cost math, token control code architecture (rolling context window, max_tokens caps, rate limiting), the 3-phase build roadmap, and all compliance details.
